Home really is the best place on earth!

What a wonderful feeling!

It's an increasingly common theme among Canadians who may be looking at the possibility of assisted living care or even a nursing home but prefer to extend the quality of life that comes from remaining in their residence.

Finally, there's help.

It comes in the form of our Personal Emergency Response Service, a powerful new option for quality of life that gives those who may need the "instant" help from time to time but not with the expense of a lifestyle change in a full-time care facility or assisted living.

With PERS, your loved ones (especially those who live alone) can have instant contact with trained, experienced professionals, on duty 24 hours a day, seven days a week. At the push of a button on the PERS lanyard or wristband, they're in contact with the client, ready to dispatch any help that may be necessary.

Our experience in responding instantly to all manner of emergency situations makes us uniquely qualified to offer this service.

The result? The priceless peace of mind that comes from knowing that those you love the most are just a push button away from receiving help.

First Line Security offers 2 types of units for rent or sale. First is our PERS2400 base station and pendant. At the push of the button the base will link to the security response centre to summon help.

Our second unit the LifeSentry will also link to the security response centre at which time the operator will speak through the pendant to assess with the emergency.

HOW IT WORKS

Both PERS units include a durable base station that connects to a standard telephone line.

It also acts as the link to the lanyard or wristband that the client will wear. Whenever help is needed, a signal activates the live link to a security response centre and a trained professional is in contact.

And help is on its way.

It's that simple. That effective.
That secure. That easy.

We're right there when you need us

With our 24-hour, seven day a week monitoring service, we offer that ever elusive "peace of mind" that comes from knowing help is just moments away.

So what's involved? Certainly technology is part of our strength. But that doesn't mean you'll be wading through a series of prompts, dealing with a "system" that wants you to do the "directing".

Your connection with us is a real person, someone with an average of 15 years' experience in getting help fast.

And yes, with the latest in technology behind the voice, plus training that meets the highest of industry standards, you can rest assured we're poised to respond, instantly.

Backup equipment, backup power and a steady, reliable voice just when you need it.

That's what we're all about.
